

For Immediate Release:

### **Burlington High School Selects Kilawatt Technologies**

**Conservation project to reduce energy consumption by 20%, saving public school over \$65,000**

Shelburne, VT-January 23, 2008- Kilawatt Technologies is pleased to announce that Burlington High School has selected the company to reduce energy consumption and lower costs at the Burlington, Vermont school campus. Over the past few years, the high school has been making a concerted effort to reduce their energy use, lower greenhouse gas emissions and contain rising costs. By partnering with Kilawatt Technologies, Burlington High School will continue these past goodwill efforts and gain access to the company's extensive knowledge, and more importantly, innovative EnerSuite software. Over the two year project, Kilawatt Technologies will reduce energy use by over 20%, potentially saving \$65,000 or higher for the school. Currently, 1,150 students in grades 9-12 attend the public school.

Kilawatt Technologies' EnerSuite provides the informational tools and resources to further the school's success in conserving and maximizing their energy resources. "We are thrilled to be supporting and partnering with Burlington High School. This is an opportunity to conserve energy, cut waste and lower expenses," said Paul Grover of Kilawatt Technologies. "We're also looking forward to working closely with interested students on this project. It is a valuable opportunity to teach and demonstrate how conservation efforts can make an impact in reducing the school's greenhouse gas emissions, consumption and costs. This is another chance for the school and community to work together setting a positive example."

Early on, Kilawatt Technologies recognized that meaningful information on what's happening in a building was the powerful tool missing for many organizations. EnerSuite exposes the hidden "unknowns" lurking in a building and gives clients a clear, real time energy snapshot of where their wasting energy. The information uncovered is rarely available or visible to building operators at this "micro" level of detail and Kilawatt Technologies then develops strategies to reduce this energy waste and address the unique "energy pain points".

All of Kilawatt's products are based on its innovative EnerSuite technology and range from affordable, internet delivered products to extensive energy conservation services. The company's software provides organizations with smart energy solutions that reduces energy consumption, eliminates waste and lowers greenhouse gas emissions. Kilawatt Technologies is headquartered in Shelburne, Vermont. For more information, please call 802.985.2285 or visit [www.kilawatt.com](http://www.kilawatt.com).
