

For Immediate Release:

### **Kilawatt Technologies and Flynn Center Partner to Save Energy!**

**Energy conservation project to lower energy use, control rising costs, and reduce greenhouse gases in historic Vermont Theater**

Shelburne, VT-March 3, 2009- Kilawatt Technologies is pleased to announce that the Flynn Center for the Performing Arts (<http://www.flynncenter.org>) located in Burlington, Vermont has selected the company to support the theater's energy and environmental initiatives. During the project, Kilawatt Technologies (<http://www.kilawatt.com>) will work closely with the center's team to reduce energy consumption, lower costs and reduce greenhouse gas emissions in the 75 year old historic theater. Kilawatt Technologies' customers consistently benefit from 15%-25% annual energy cost savings, and working closely with the Flynn's team will also prevent thousands of pounds of CO2 from entering the atmosphere.

Kilawatt's unique EnerSuite diagnostic and optimization software primarily focuses on improving operational efficiency of existing building equipment. Utilizing the facility's modern systems and dedicated team will provide the support that will allow Kilawatt to make great strides conserving the center's energy resources. The Flynn Center for the Performing Arts has already invested in sophisticated equipment and has a history of thoughtful practices to conserve energy. Bringing in Kilawatt's expertise and unique technology is a part of a careful review of how the Flynn Center can best use their resources to enable the continued vitality of the center's programs and services contributing to the quality of life and vitality of the community.

The project also takes on even more significance as the Flynn Center for the Performing Arts was able to engage Kilowatt Technologies services thanks to a generous donation by a thoughtful and wise donor interested in conservation. “This gift and the recommendation of a satisfied customer made working with Kilowatt Technologies an obvious choice,” said Andrea Rogers of the Flynn Center for the Performing Arts.

The Flynn has been at the center of Vermont's cultural landscape for over 75 years—from its earliest days as a vaudeville house through five decades as a premier movie theater to its present incarnation as the region's leading performance center and arts education organization. Today, the Flynn Center for the Performing Arts is recognized internationally for its significant artistic, educational, and community outreach activities; superb technical capacity; beautiful ambiance; historic setting; and world-class presentations.

“We are thrilled to be supporting an organization that has a strong and rich legacy of connecting our community with the arts,” said Ted Fisher of Kilowatt Technologies. “The Flynn Center is dedicated to preserving the historic integrity of their facility and being a model for organizations and non-profits in conserving their resources and focusing on sustainability.”

Kilowatt Technologies is located in Shelburne, Vermont and is a leading information software company helping organizations around the world to reduce energy costs and lower greenhouse gases in larger commercial and industrial buildings with little or no capital investment.
