## **Barre Town School Board Selects Kilawatt Technologies To Lower Energy Costs**

**Program to achieve 20% annual energy savings and 22% reduction in greenhouse gases for Vermont public school**

Shelburne, Vermont: Paul Grover, President of Kilawatt Technologies is pleased to announce that the Barre Town School Board has signed a two-year agreement to work with the company to implement an energy savings and greenhouse gas reduction program for the Vermont public school. This new partnership will utilize Kilawatt Technologies innovative software, EnerSuite to lower energy costs and reduce greenhouse gas emissions. By understanding and pinpointing energy waste, Kilawatt Technologies is able to provide cost effective strategies for reducing energy consumption and costs with no capital investment. Together, the partnership plans to achieve a 20% annual drop in energy costs and a 22% or more reduction in greenhouse gases. Built in 1966, the Barre Town School is one of three public schools in the community and currently, 915 school children, grades K-8, attend the 158,000 sq. ft. school.

“Energy is one of the largest expenses in operating any school or building and our company saves valuable financial resources that can be applied to other vital school programs,” said Paul Grover of Kilawatt Technologies. “Our technology and cost reduction program also lowers greenhouse gas

emissions and we verify actual results for the school. The Barre Town School community can get actively involved in fighting global warming, and set a positive example of what together, we can accomplish for the environment.”

During the next month, Kilowatt Technologies will collect large amounts of information and data about the school’s operations and the needs of the teachers and students. They will then analyze this energy footprint using their EnerSuite software, develop recommendations, and working closely with the school, implement these actions to conserve energy, lower costs and reduce greenhouse gases.

"The Barre Town community has been extremely supportive of previous energy conservation projects, including the conversion to wood chips for heat and the recent installation of energy efficient windows, said David Harrington, Chair of the Barre Town School Board. “Our partnership with Kilowatt Technologies reflects our ongoing commitment to conserve energy and pass the savings onto the taxpayers."

Kilowatt Technologies is national software company headquartered in Shelburne, Vermont. The company has developed innovative, proprietary energy conservation software called EnerSuite, and is on the leading edge of providing practical, successful solutions that support global warming initiatives for organizations. Kilowatt Technologies is one of a few national companies focusing on cutting energy costs and reducing greenhouse gases by utilizing software and diagnostic technology.
