Kilawatt Technologies Selected by Brandywine Realty Trust for Energy Reduction Program at Three New Jersey Buildings

Shelburne, VT-June 9, 2009- Kilawatt Technologies is pleased to announce Brandywine Realty Trust located in Radnor, Pennsylvania has selected the company to help explore an energy reduction program for three buildings located in Mt. Laurel and Lawrenceville, New Jersey. Kilawatt Technologies (<http://www.kilawatt.com>) will work closely with Brandywine's New Jersey property management team to attempt to reduce energy consumption, lower costs and reduce greenhouse gas emissions in these buildings that range in size from 67,000 square feet to 182,000 square feet.

Kilawatt's innovative EnerSuite equipment optimization software and diagnostic analysis visually displays how energy is being consumed in a facility, and recognizes where energy and environmental savings opportunities exist. By continually monitoring building equipment data and performance, Kilawatt's energy team focuses on equipment operational efficiency that represents a large component of an effective energy cost savings and reduction program. Kilawatt Technologies' customers typically benefit from 15%-25% annual energy cost savings, and EnerSuite's information provides an organization's facility team with valuable resources to cut energy consumption.

Kilowatt Technologies is headquartered in Vermont, and is a leading information software company helping organizations around the world reduce energy costs and lower greenhouse gases in larger commercial and industrial buildings with little or no capital investment. To learn more about Kilowatt Technologies, please call 802.985.2285 or visit <http://www.kilowatt.com>.
